Respiratory Pathogen Panels

Comprehensive detection of respiratory co-infections in
a single test for better patient outcomes and reduced costs

Respiratory Tract Infections (RTIs)

affect the sinuses, throat, airways, and lungs.

Upper RTIs, such as the common cold, usually cause mild symptoms like a runny nose or sore throat, while **lower RTIs**, including pneumonia, can be severe and may require hospitalization.

RTIs can be caused by **viruses, bacteria, or fungi**, affecting both the upper and lower respiratory tracts.

RTIs can be caused by many pathogens, but most tests detect only few of them.

RTI symptoms are often complex, and antibiotics are frequently prescribed in primary care.

Overuse of antibiotics contributes to antibiotic resistance.

Comprehensive panel-based respiratory tests can help reduce unnecessary antibiotic use and shorten hospital stays.

+ Technology

Patented **Multicolor Melting Curve Analysis (MMCA®)** and **MeltArray** maximize the number of targets per channel, delivering high-level multiplex detection in a single reaction while saving samples and time.
